

## Environmental Information For Electricity From Pepco Energy Services

### PowerChoice 100% Wind Generated Electricity

The following environmental information is for electricity supplied from January 1, 2007 to June 30, 2007

Electricity can be generated in a number of ways with different impacts on the environment. The standardized environmental information shown below allows you to compare this electricity product with electricity products offered by other electricity suppliers.

#### Energy Source

	Coal	0.00%
	Oil	0.00%
	Natural Gas	0.00%
	Nuclear	0.00%
	Captured Methane Gas	0.00%
	Geothermal	0.00%
	Hydroelectric	0.00%
Renewable energy sources subtotal:	Solar	0.00%
	Solid Waste	0.00%
	Wind	100.00%
	Wood or other Biomass	0.00%
	Unspecified Renewable	0.00%
	<b>Total</b>	<b>100.00%</b>

#### Air Emissions

The amount of air pollution associated with the generation of the electricity production for this region is shown in the table to the right.

Pounds Emitted per Megawatt Hour of Electricity Generated

Sulfur Dioxide (SO <sub>2</sub> )	0
Nitrogen Oxides (NO <sub>x</sub> )	0
Carbon Dioxide (CO <sub>2</sub> )	0

CO<sub>2</sub> is a "greenhouse gas," which may contribute to global climate change. SO<sub>2</sub> and NO<sub>x</sub> released into the atmosphere react to form acid rain. NO<sub>x</sub> also reacts to form ground level ozone, an unhealthful component of "smog."
